

Financial Infrastructure Solutions

Enhance your competitive advantage by maximizing speed and minimizing latency

What's in a Millisecond?

Just billions of dollars.
When markets move, milliseconds matter.

And Savvis Responds.

It's a constant race to the market.

Reduce latency to get there fast.

Savvis financial solutions speed automated trading responsiveness

Speed is a hot commodity in the financial industry. And latency, the lag between transmission and receipt, is the enemy of opportunity. But achieving sub-millisecond transactions is no simple task: it requires reduced latency at every step — from data reception to decision making to trade execution.

Follow these guiding principles to minimize latency¹

- Place trading applications close to exchanges
- Establish direct connections to exchanges when possible
- Increase bandwidth to funnel high volumes of data quickly
- Utilize extranet solution to avoid costly capital expenditures

Customized solutions for the trade lifecycle

Savvis offers a suite of high performance solutions for each stage of the trade lifecycle, from market data to decision support to execution, and all points in between.

Pre-Trade Market Data

On-demand access to real-time data from trading venues.

- > Community of Interest Network (COIN)
- > Savvis Exchange Express
- > Network Services

Decision Support

Run high-speed applications in a powerful hosting environment near market data sources.

- > Proximity Hosting
- > Managed Compute
- > Colocation

Trade Execution

Execute trades quickly with low-latency.

- > Savvis Exchange Express
- > Secure Financial Transaction Infrastructure (SFTI)
- > Financial Transaction Service (FTS)
- > FTS Connected

End-to-end Services

Optimize IT solutions with a range of services designed to provide quality and performance.

- > Managed Security
- > Storage, Backup and Vaulting
- > Professional Services

With over a decade of service in the financial sector, our experience has helped us develop one-of-a-kind solutions that give financial firms a true competitive edge.

How Savvis speeds the response

Savvis financial solutions are built on the guiding principles of low latency, high availability and maximum flexibility. Whenever possible, we connect you directly to markets and partners, eliminating unnecessary “hops” which add latency. We choose the optimal paths for network connectivity, ensuring minimal fiber distance between points of interest.

Proximity Hosting allows you to place trading systems closer to markets, dramatically reducing latency. Savvis Exchange Express adds low-latency, high-bandwidth Ethernet connectivity to markets outside the data center. COIN provides access to the full suite of Savvis market data products — across asset classes and all over the world, giving you cost-effective access to markets where latency isn’t critical.

Our strength is our infrastructure

We know you’re not limited to trading on one exchange in one location. That’s why we created a financial infrastructure that offers high-speed connectivity, expandability, and reliability on a global scale. With multiple state-of-the-art data centers interconnected by our global, high-speed network, you can place trading applications in any number of low-latency locations, tie them back to your main office, feed data back to the trading floor, and connect to partners.

The network that powers Wall StreetSM

That is how people in the financial industry refer to Savvis. Because our infrastructure served as the first IT backbone for many financial organizations. And with over a decade of service in the financial sector, our experience has helped us develop one-of-a-kind solutions that give financial firms a true competitive edge.

When milliseconds count, count on Savvis

We can provide it all — data center space and power, LAN and WAN networking, servers, data storage, management and security products. Take into account Savvis’ comprehensive array of financial solutions, and you can see why we’re in a unique position to provide true, single-source services for the automated trading model.

Call today and see how Savvis financial solutions can speed your response and improve your ability to compete in the market.

Savvis Managed IT Services

Financial Services

Savvis offers a suite of high performance solutions for each stage of the trade lifecycle, from market data to decision support to execution, and all points in between.

Solutions for Pre-Trade Market Data

- **Community of Interest Network (COIN):** One bundle of real-time market data routed to multiple subscribers.
- **Savvis Exchange Express:** Direct access from your location to major exchanges via metro Ethernet.
- **Network Services:** A robust, reliable and scalable method for transporting market data.

Solutions for Decision Support

- **Proximity Hosting:** Get fast access to leading exchanges hosted in Savvis data center. Reduce latency by getting physically close to data sources.
- **Managed Compute:** Linux® operating systems, all stored on our industry standard infrastructure.
- **Colocation:** With over one million square feet of raised floor space, Savvis can accommodate a large range of server configurations.

Solutions for Trade Execution

- **Savvis Exchange Express:** Reduce latency for data transfer by getting direct access from your location to major exchanges via metro Ethernet.
- **Secure Financial Transaction Infrastructure (SFTI):** Savvis offers advanced access to the Securities Industry Automation Corporation's (SIAC) SFTI® network.
- **Financial Transaction Service (FTS):** Secure, high-performance network that provides the flexibility and cost effectiveness of a trading hub. Plug into a network of thousands of financial institutions instantly through an FTS gateway.

Professional Services

The Savvis Professional Services organization is focused on helping customers implement customized IT solutions. Whether your goal is to improve existing facilities/systems, relocate your data center, or help you to secure your critical applications our knowledge has placed Savvis as one of the leading IT consulting services in the market.

Network

The Savvis Application Transport Network (ATN) delivers a robust, reliable, and application-aware transport network that allows customers to select Quality of Service (QOS) levels to best suit their needs.

Private Network Services

- **Application Transport Network (ATN)**
 - > Private
 - > Private + Internet
 - > Virtual Link
- **Intelligent IP**
 - > Private Network
 - > Private Network + Internet
 - > Private Exchange
 - > COIN
- **Private Line**
 - > EVPL
 - > Bandwidth Connect

Public Internet Services

- **Application Transport Service Public**
 - > Managed
 - > Unmanaged
 - > With Firewall

Hosting

Savvis delivers cost savings and scalability with its suite of enterprise-class, managed hosting, utility computing and storage services.

Managed Compute Services

- **Dedicated**
 - > Foundation Hosting
 - > Intelligent Hosting
 - > Virtual Intelligent Hosting
- **Utility**
 - > Utility Compute

Managed Applications

- **Managed Messaging and Collaboration**
 - > Hosted Microsoft Exchange
- **Managed Database Applications**
 - > Managed Oracle
 - > Managed DB2
 - > Managed Microsoft SQL
 - > Managed My SQL
- **Managed Web Applications**
 - > Apache
 - > IIS
 - > Managed Sun Java System Web Server

Storage, Backup and Vaulting Services

- **Utility Storage**
- **Utility Backup**
- **Utility Vaulting**
- **Backup Care**

Colocation

Hosting Area Network Service

- **Managed Dedicated Load Balancing and SSL Acceleration Services**
- **Virtual Services Load Balancing and SSL Acceleration**
- **Managed Utility Load Balancing Service and Managed Utility SSL Acceleration Service**

Savvis Intelligent Monitoring

Security

Savvis' Security Services benefit your company by providing flexible and scalable managed security offerings that do not require hardware or software to be installed or managed at your premises.

Firewall

- **Network-Based Firewall**
- **Virtual Services Firewall**
- **Virtual Firewall Enhanced**
- **Integrated Firewall w/NIDS**

Intrusion Detection

- **Network Intrusion Detection Services**
- **Host-Based Intrusion Detection**

Network-Based DDoS Mitigation

Cloud-Based E-mail and Web Protection

Content Integrity Monitoring

Incident Response
